# TRIUNFO DO XINGU RECOVERY UNIT

A new  
concept in  
environmental  
asset  
management

## WHAT IS A RECOVERY UNIT?

It is a new category of protection created especially for deforested or degraded areas, in the process of recovering vegetation cover. The recovery can be carried out through a concession, for a certain period of time, for the execution of the project.

### WHY WAS THE TRIUNFO DO XINGU APA CHOSEN?

The Triunfo do Xingu APA guards an important reserve of Amazonian biodiversity and today is one of the protected areas most threatened by illegal deforestation in Brazil.

### WHAT WILL THE NEW CONCESSION MODEL LOOK LIKE?

The area will be granted for 40 years, with the concessionaire having the right to exploit assets such as carbon credits from restoration, with excellent return prospects.

**2.7** millions tons  
of carbon  
sequestered

Estimated investment  
**USD 44 million**

**2K** local  
direct jobs

Estimated revenue  
**USD 81 million**

Average price  
VCU/ha/year

20 initial years  
**USD 292**

after 20 years  
**USD 81**

Reference value  
**USD 30 - 1 VCU**

Return on  
Investment

**10 years**

## PURPOSES OF THE RECOVERY UNIT

- ▶ Restore native vegetation, biodiversity and ecosystem services.
- ▶ Stimulate the socioeconomic development of the region, generating employment and income.
- ▶ Discourage the invasion of public lands and inhibit illegal activities, providing more security to the territory.

### GLOBAL CARBON PROJECTS (ARR)

**143** projects  
running

### ESTIMATED CAPTURE IN ARR PROJECTS

**30** million tons  
of CO<sub>2</sub>

### ARR CERTIFICATION (2021)

**16** million tons  
of CO<sub>2</sub> certified

## PARTNERSHIP WITH THE COMMUNITIES OF THE TERRITORY

- ▶ Job opportunities and professional training with local value generation.
- ▶ Movement of the economy
- ▶ The project will not be carried out in any private area.
- ▶ The project foresees the participation of the local population through listening processes in the territory.
