How to Invest in the Amazon

# URTX:

## NEW CONCEPT IN ENVIRONMENTAL ASSET MANAGEMENT Triunfo do Xingu Recovery Unit

The major challenges of the Amazon include combating deforestation and promoting public policies for sustainable development. The lack of economic alternatives, combined with the vast territorial extension and access difficulties, complicate the fight against deforestation and the irregular exploitation of natural resources.

In light of the urgency to combat illegal deforestation, the invasion of public lands, and the need to promote large-scale forest area restoration, the creation of a new category of Protected Area for Forest Restoration

through concession emerges as a promising solution. This measure aims to protect the environment and contribute to the sustainable development of the region, offering opportunities for a green and lasting economy. The URTX model will be replicated in other territories, with great potential for scaling and return, especially in the carbon market, in restoration projects (ARR). Everything will be executed with integrity, on public lands, following best practices and with the participation of communities, who are partners and main stakeholders in the consolidation of this model.

### TRIUNFO DO XINGU RECOVERY UNIT

Ecological restoration concession remunerated with carbon credits generated from forest recovery.

**40 YEARS** of concession to restore more than **10 THOUSAND HECTARES**

**3.7 MILLION tCO<sub>2</sub>** sequestered over the contract period

**USD 31.7** million OPEX / USD **12.8 MILLION** CAPEX

**TWO THOUSAND** jobs for the region

**BID OPEN** until January 2025 at [semas.pa.gov.br/urtx](http://semas.pa.gov.br/urtx) and [ideflorbio.pa.gov.br](http://ideflorbio.pa.gov.br)

This is an investment opportunity for the Amazon, with benefits for all. The future of the forest depends on the future of the people, and sustainable development remains the most effective conservation tool. The concession for forest restoration in the Amazon goes beyond the limits of the granted area. The public-private partnership promotes the recovery of biodiversity and ecosystem services, in addition to generating jobs, technical training for the local population, encouraging the creation of nurseries, and strengthening regional

productive chains.

Concessions integrated with society strengthen the local economy and legal activities, significantly reducing the space for illicit and environmentally harmful activities. In addition to direct productive investment, the Triunfo do Xingu Recovery Unit (URTX) envisages active community participation, with the hiring of local labor, services, and inputs, as well as partnerships in agroforestry productive chains.
